

Author Index for Volume 23

Cocking, Janis L., 237

Douglass, D. L., 251
Dovi, V., 35, 141, 191

Fryt, E. M., 77

Gesmundo, F., 35, 141, 191
Gnanamoorthy, J. B., 17

Jha, B. B., 159
Johnston, Graham R., 237
Johnson, William C., 237

Khanna, A. S., 17, 159
Kofstad, P., 251

Mrowec, S., 107
Mukherjee, S. K., 177

Patnaik, P. C., 53
Pendse, R., 1
Przybylski, K., 107

Smeltzer, W. W., 53
Stott, F. H., 77
Stringer, J., 1

Tempest, P. A., 207

Upadhyaya, G. S., 177

Viani, F., 35, 141, 191

Whittle, D. P., 77
Wild, R. K., 207
Wood, G. C., 77, 251

Subject Index for Volume 23

- Abrasion, role of oxides, 315
Acoustic emission, use of to detect scale spalling, 159
Adhesion of scales, 280
Adsorption, 253
Atomistics of scale growth, 270
- Breakaway oxidation, Cr-Mo steel, 159
Breakdown of protective scales, 333
- Carburization, interaction with creep on oxidation, 287
Chemical diffusion coefficients, evaluation of from relaxation experiments, 191
Chlorides, role of in high-temperature corrosion, 305
Co-Cr alloys, effect of prior internal oxidation on oxidation, 77
Co-10Cr-11Al, oxide-peg formation, 1
Cold work, effect of on oxidation of 2Cr-1Mo steel, 17
Composites, 434L stainless steel-Al₂O₃, oxidation, 177
Compounds, oxidation of, 322
Cr-Mo steel, effect of cold work on oxidation, 17
Cr-Mo steel, scale spalling, 159
Creep, interaction with oxidation, 287
Cr₂O₃, growth of on 20Cr-25Ni-Nb stainless steel, 207
- Defects, complex, nature and transport mechanisms, 259
Doped oxides, P-type, chemical-diffusion coefficient, 191
- Electrical conductivity changes, use of in relaxation experiments to determine chemical diffusion, 191
Equilibrium, relaxation experiments, 35
Erosion, role of oxides in, 315
- Fe-Al alloys, sulfidation in H₂/H₂S, 53
Ferritic stainless steel, 434L, oxidation of sintered composites, 177
Fissures in scales, 301
- Gaseous species, transport in scales, 266
Grain-boundary transport in oxide scales, 261
- Hot corrosion, 311
- Impurities, influence on transport properties, 296
In-situ methods to study oxidation, 326
Intergranular oxidation of alloys, 292
Internal oxidation, effect of on oxidation of dilute Co-Cr alloys, 77
Internal oxidation of alloys, 292
- Kinetics of equilibration in relaxation experiments, 35
Kinetics, oxide equilibration during relaxation, 141
- Microstructure, influence of on oxide-peg formation, 1

- Ni-Si-Mg, effect of platinum on oxidation, 237
- Nucleation, 253
- Pegs, oxide, effect of alloy microstructure on formation of, 1
- Platinum, effect of on the oxidation of Ni-Si-Mg, 237
- Protective scales, breakdown of, 333
- P-type oxides, relaxation experiments to determine chemical-diffusion coefficients, 191
- Reactive elements, effect of on scale adhesion, 280
- Reactive metals, effect of on oxide-peg formation, 1
- Relaxation experiments, partial surface control, 35, 141
- Relaxation experiments, use of to determine chemical-diffusion coefficients, 191
- Scanning Auger microscopy, use of to study oxidation, 237
- Spalling, oxide scale, detection of by acoustic emission, 159
- Spinel, growth of on 20Cr-25Ni-Nb stainless steel, 207
- Stainless steel, 20Cr-25Ni-Nb, growth of oxides, 207
- Sulfidation, Fe-Al alloys, 53
- Sulfidation of metals, transport properties of scales, 107
- Sulfide scales, transport properties, 107
- Surface control, oxide equilibration during relaxation, 141
- Surface reaction, partial rate control during relaxation experiments, 35
- Transport properties, sulfide scales, 107
- Voids in scales, 301
- Wear, role of oxides in, 315
- Workshop, Critical Issues Concerning Mechanisms of High-Temperature Corrosion, 251

Instructions to Contributors

1. Manuscripts should be sent to:
Prof. D. L. Douglass
Materials Department
Room 6531, Boelter Hall
University of California at Los Angeles
Los Angeles, California 90024
2. Submission is a representation that the manuscript has not been published previously and is not currently under consideration for publication elsewhere. A statement transferring copyright from the authors (or their employers, if they hold the copyright) to Plenum Publishing Corporation will be required before the manuscript can be accepted for publication. The Editor will supply the necessary forms for this transfer. Such a written transfer of copyright, which previously was assumed to be implicit in the act of submitting a manuscript, is necessary under the new U.S. Copyright Law in order for the publisher to carry through the dissemination of research results and reviews as widely and effectively as possible.
3. Type double-spaced, and submit the original and two copies (including, where possible, copies of all illustrations and tables).
4. An abstract of 150 words or less is to be provided.
5. A list of 4–5 key words is to be provided directly below the abstract. Key words should express the precise content of the manuscript, as they are used for indexing purposes, both internal and external.
6. Illustrations (photographs, drawings, diagrams, and charts) are to be numbered in one consecutive series of Arabic numerals. The captions for illustrations should be typed on a separate sheet of paper. Photographs should be large, glossy prints, showing high contrast. Drawings should be prepared with india ink. Either the original drawings or good-quality photographic prints are acceptable. Identify figures on the back with author's name and number of the illustration.
7. Tables should be numbered and referred to by number in the text. Each table should be typed on a separate sheet of paper.
8. References should be made by using superscript Arabic numerals, and the full references should be given in a list at the end of the paper. For maximum clarity, abbreviations should be avoided in the references. Whenever a book is cited, the number of the relevant chapter should be given.
9. In general, *Oxidation of Metals* follows the recommendations of the American Institute of Physics in their *Style Manual*, and it is suggested that contributors refer to this publication.
10. **The journal makes no page charges.** Reprints are available to authors, and order forms are sent with proofs.

OXIDATION OF METALS

Vol. 23, Nos. 5/6

June 1985

CONTENTS

A Scanning Auger Microscopy Study of the Influence of Platinum on the High-Temperature Oxidation of a Nickel-Silicon-Magnesium Alloy	237
<i>Graham R. Johnston, Janis L. Cocking, and William C. Johnson</i>	
International Workshop on "Critical Issues Concerning the Mechanisms of High-Temperature Corrosion"	251
<i>A. Rahmel, G. C. Wood, P. Kofstad, and D. L. Douglass</i>
